

# ABSTRACT OF THE DISCLOSURE

Low transmittance glass is composed of soda-lime-silica glass including 0.001 to 2 wt.%  $\text{Li}_2\text{O}$  and, as colorant, 0.7 to 2.2 wt.% total iron oxide expressed as  $\text{Fe}_2\text{O}_3$  (T- $\text{Fe}_2\text{O}_3$ ). The glass has visible light transmittance (YA) of not greater than 65%, measured by using the CIE illuminant A, total solar radiation transmittance (TG) of not greater than 60%, and ultraviolet transmittance defined by ISO 9050 of not greater than 25%, when the glass has a thickness between 2.1 mm and 6 mm.
